Summary

Unity/C# developer with 5+ years of experience building commercial mobile games and gameplay systems for Android and iOS. Primary developer on a real-time multiplayer card game, owning client-side architecture, gameplay flows, networking integration, monetization, live ops, diagnostics, and release tooling. Strong background in WebSocket-based multiplayer, state-driven UI/gameplay synchronization, Firebase integrations, in-app purchases, production support and version control.

Professional Experience

Gameplay Developer

Jogos do Rei, Florianópolis, SC (Remote)

Aug 2023 - Present

- Primary Unity developer for Buraco, a commercial real-time multiplayer mobile card game, owning client-side architecture, gameplay systems, networking integration, monetization, diagnostics, release tooling, version control with Git in GitHub.
- Designed a state-driven client layer to synchronize gameplay state, UI, animations, and server-driven events across match flow and reconnection scenarios.
- Implemented real-time WebSocket communication with custom message serialization, ordered message processing, auto-reconnect, and session/match recovery flows.
- Built gameplay and presentation systems for hands, melds, discard pile, turn phases, scoring, and multiple Buraco/Tranca rule variants.
- Integrated WebView-based authentication, Unity IAP subscriptions with backend validation, and Firebase Analytics, Remote Config, and Push notifications to support monetization and live operations.
- Added production observability with Sentry, code review, runtime/network breadcrumbs, and missing-message reporting to improve debugging and live issue investigation
- Built editor and release automation for Android and iOS push notification post-processing and store-to-Remote-Config sync workflows via GitHub Actions, CI/CD and Automated Tests.

Gameplay Developer

OutWorld Studio, Deerfield Beach, FL (Remote)

Feb 2022 - Aug 2023

- Designed and implemented core gameplay systems for Merge Club, collaborating with design, art, and engineering to ship polished mobile features.

- Implemented Addressables and Unity Cloud Build workflows to support remote content delivery and faster release iteration.
- Set up PlayFab remote config and content management pipelines for live tuning and feature rollout.
- Improved mobile performance and stability by resolving gameplay and production issues across live builds.

Software Developer

Infotreasury Informática LTDA, Brazil, SP

Feb 2020 - Feb 2022

- Developed backend features and APIs for financial-market software using C# and ASP.NET.
 - Refactored application architecture to improve maintainability, scalability, and API-first delivery.
 - Built SQL Server procedures and data-layer solutions based on client and business requirements.
 - Delivered production features in collaboration with technical and business stakeholders.
-

Education

Postgraduate Degree in Digital Game Arts

Faculdade Méliès, Brazil

Jan 2021- June 2022

Technologist Degree in Digital Games

Faculdade Eniac, Brazil

Jan 2018- June 2020

Skills

- Game Development: Unity, gameplay systems, UI, animation systems, multiplayer client architecture, mobile game development
 - Networking & Services: WebSocket, REST APIs, JSON, Firebase Analytics, Firebase Remote Config, FCM, PlayFab
 - Monetization & Mobile: Unity IAP, subscriptions, WebView, Android/iOS integrations, push notifications
 - Architecture & Quality: event-driven architecture, state-driven UI, coroutines, async/await, unit tests, NUnit, CI/CD, Automated Tests, Object-oriented programming
 - Tools: Git, GitHub Actions, DOTween, Addressables, Unity Cloud Build, Sentry
 - AI Tools: Codex, ChatGPT, Unity MCP, Claude Code, Gemini
-
